

## A Simple Solution for Reducing Branch Labor and Improving Your Bottom Line

United Technologies' TRACcess from **BranchServ** is an intuitive vendor access management solution that improves retail efficiencies without sacrificing security for financial institutions. And easy implementation will deliver immediate results for your bank or credit union.

## WHAT IT DELIVERS

### Enhanced Protection

The UL Listed TRACcess system is mounted on the exterior wall of each facility for the containment of the outside branch door key, much like the Knox Box for fire department access. Access is then facilitated by electronic key (eKEY) with complete administrative control retained by the financial institution.

After vendors are vetted internally, the bank determines which facilities they can access, and provides them with a Smartphone App\* and an authorization number. Then, if facility access is required after-hours, the vendor simply opens the App and enters the authorization number to request an authorization code. This request generates a new and unique 30-digit eKey for interface with the TRACcess system, prompting the entry of a separate 4 digit PIN which allows access to the key and branch entry. The whole process takes less than a minute.

Financial institutions can remotely de-activate authorizations at any point to 'lock-out' the vendor, and the system is highly secure with real-time access to an audit trail. Furthermore, the numbers of keys floating around is significantly reduced; adding to the security component of this product.

*\* TRACcess DisplayKEY wireless electronic key also available as Smartphone App alternative.*

### Streamlined Process

TRACcess allows financial institutions to establish and enforce one consistent vetting process for all vendors requiring branch access. Set-up and management are exceedingly easy. And the FI only assumes responsibility for managing the vendor, not its employees. The vendor assumes responsibility for managing specific key holders, thus reducing the burden on the bank.

Key management suddenly becomes much easier, and the need for sending bank employees for 'vendor meets' is mitigated. Furthermore, access can be managed and authenticated remotely, eliminating false intrusion alarms and creating multiple efficiencies.

### Reduced Cost

TRACcess offers two primary cost savings. The first is the elimination of costly, and inconvenient 'vendor meets'. The second is the reduction in key management costs which, due to coordination requirements, lock changes and administration, averages \$500 per branch or more annually in the US. Ultimately, implementation of TRACcess has excellent payback, with an ROI of 11-15 months.

### TRAC-Vault Surface-Mount with Cover Dimensions

Height .....	6"
Width .....	5"
Depth .....	5"
Weight .....	14 lbs.
