

ATM Access (ATMA) NFC Enabled Card System With SKIM-ASSURE™ Technology

The new Synergistics's ATMA card access system from BranchServ for unmatched reliability, low cost, high quality, and the best value for your access control security investments

What It Is

Synergistics's new enabled reader and controller with SKIM-ASSURE™ technology from BranchServ helps detect skimmers and generates alarms when they are discovered. The new kits are retrofitted to ensure compatibility with any of the earlier models and takeovers of all other manufacturer's access control units for easy system upgrades.

Now with NFC enabled card-less access

NFC cards and enabled phones are now able to interface with the Synergistics Skim-Assure reader to grant admittance into the ATM vestibule. This allows for bank vestibule access control without the need to insert a bank card into the reader.

What It Does

SKIM-ASSURE™ with NFC technology detects and inhibits skimming operations and generates an alarm or a system notification in the event of;

- Wire cut
- Skimmer pressure mount
- Reader or controller tampering
- Auxiliary relay
- Unauthorized wireless entry attempt

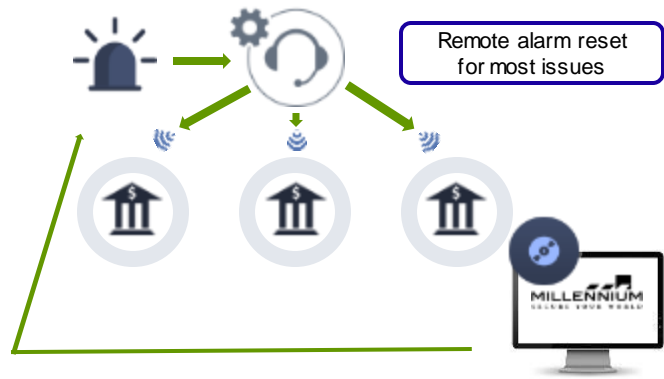

How It Works

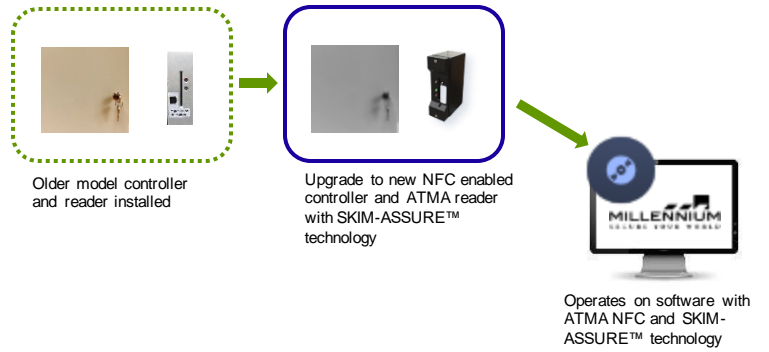

Powered by the Synergistics proprietary ATMA management software, it provides low cost remote access to resolve most of your access control support needs. With the software, most service requests can be handled without sending a technician to the field. You get access to status messages from ATMA controllers indicating online/offline, skimmer present, tamper or ambient lighting too low. Most alarms can be resolved remotely with the click of a button after an investigation.

BranchServ enjoys a Synergistics priority status which allows for unique customer requests, round the clock tech support, and the ability to customize client systems to suit preferences.

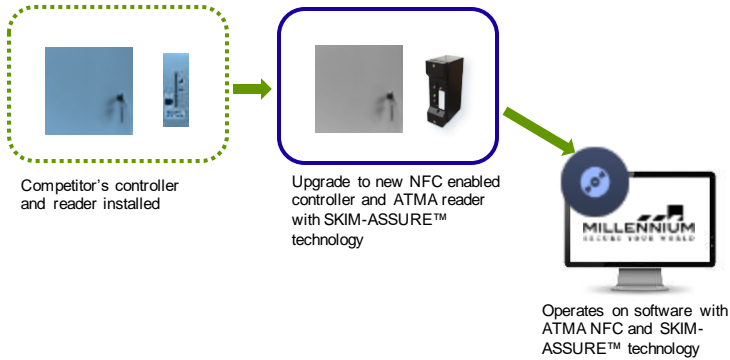

WHY CHOOSE BRANCHSERV

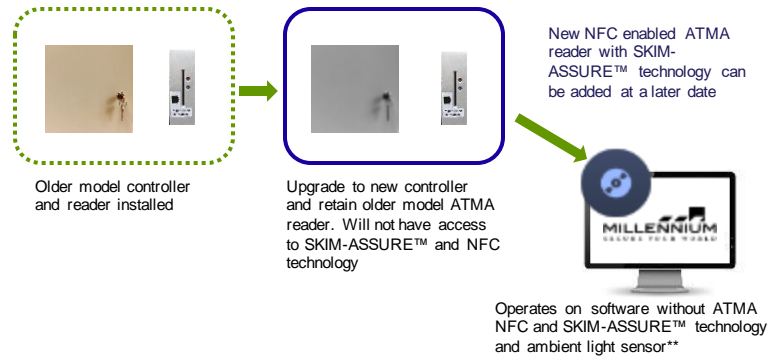

Upgrade option 1
