

VirusGuard™ Barriers

Our new VirusGuard™ - Mobile Barrier and Fixed Barrier systems are specifically designed in response to the coronavirus (COVID-19) pandemic. They are non-ballistic solutions that offer an additional layer of sanitary and threat protection for public facing workers in Essential Service Organizations.

TOTAL
SECURITY
SOLUTIONS

1 SAFETY + AESTHETICS

VirusGuard products are intentionally designed for safety and to complement the aesthetics of your facility. If your brand image is important, VirusGuard barriers will add rather than subtract from your hard-earned aesthetics.

2 QUALITY & DURABILITY

Unlike some competing products, VirusGuard barriers are built from high-grade acrylic and are engineered for years of dependable, good-looking service.

3 SANITARY & THREAT PROTECTION

Much like sneeze-guards in a restaurant, VirusGuard products block the spray of bodily fluids from human sneezes and coughs. Additionally, they provide a layer of protection from irate customers contemplating a physical assault.

4 CUSTOMIZABLE & UPGRADEABLE

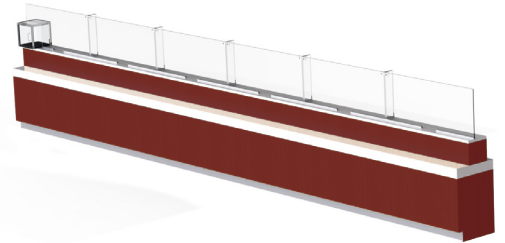

VirusGuard - Fixed Barrier Systems are customized to fit your existing counter-tops and teller lines. While not ballistic, the glazing can easily be upgraded in the future to bulletproof glass if desired.

5 EXPEDITED DELIVERY

During this coronavirus pandemic, we are expediting the manufacture and delivery of all VirusGuard products for Essential Businesses.

VirusGuard™ Fixed Barrier System

Made of ½" acrylic, this is the solution for teller lines and other locations warranting a permanent installation with an upgrade path to full ballistic protection in the future.

VirusGuard™ Mobile Barrier

Made of ½" acrylic, this is the solution for situations requiring the flexibility of a portable barrier. Weighing just 25 lbs., it's easy to move as needs change.

Bulletproof Glass

or

VirusGuard™

One Stops Bullets, Both Help Block the Spread of Viruses

If you're considering adding an extra layer of security to protect your employees with either bulletproof glass and/or one of our new VirusGuard™ products, you'll want to know the proper applications of each solution.

The most important distinction between these solutions is that one protects against bullets and the other doesn't. **Protection against gunfire only comes from bulletproof glass certified and tested by Underwriters Laboratories (UL).** While bulletproof glass doubles as a physical barrier that can aid in slowing the spread of viruses, our VirusGuard™ products were specifically developed in response to the COVID-19 pandemic, and because they are non-bulletproof solutions, they have a faster turnaround time for manufacturing and shipping.

Bulletproof Glass

BULLETPROOF
ACRYLIC

VirusGuard

ACRYLIC

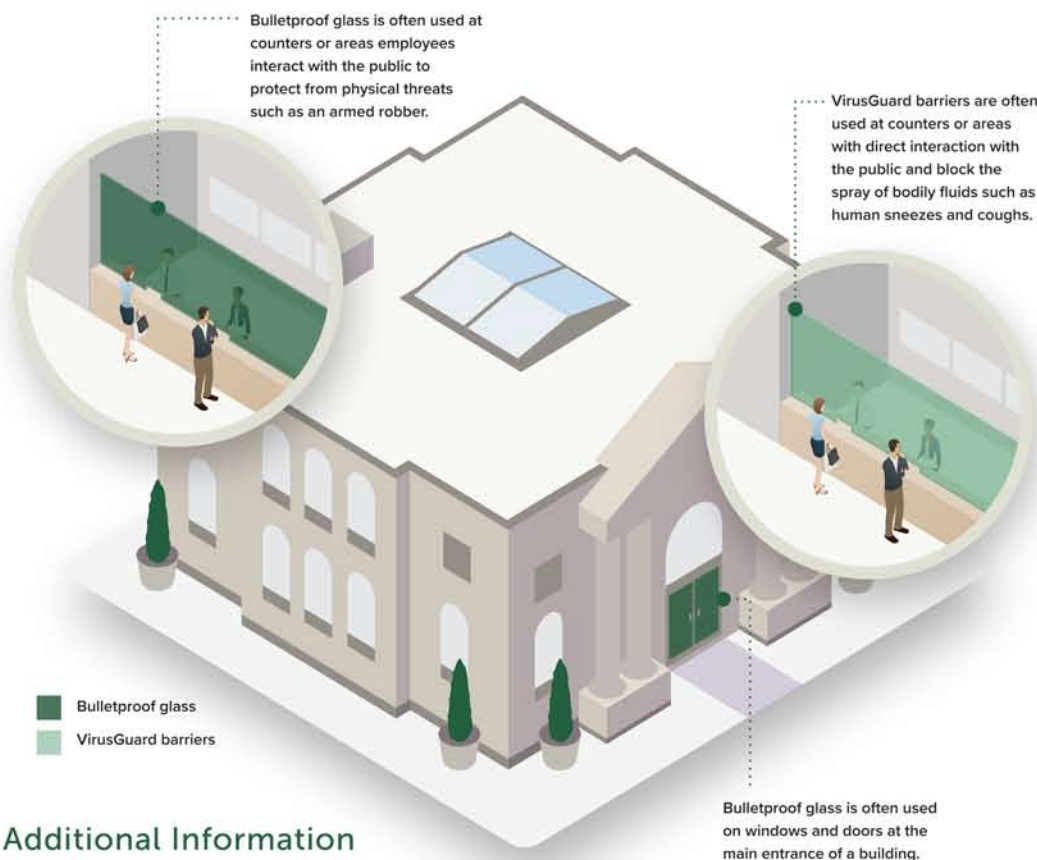

BULLETPROOF GLASS DETAILS

- Bulletproof glass is the only material that can stop bullets from an active shooter.
- Appropriate applications for bulletproof glass are: **protection from severe weather and gunfire.**
- Bulletproof glass is UL-rated for ballistic protection. It has been tested and rated by Underwriters Laboratories, which sets standards for different product categories and tests products to make sure they meet the standards.
- Bulletproof glass installation should only be completed by a professional installer.

VIRUSGUARD DETAILS

- VirusGuard products can serve as a physical barrier/deterrent and are used for reducing the spread of viruses that can be transmitted through coughs and sneezes.
- Appropriate applications for VirusGuard products are: **provide an optically clear barrier between individuals, blocking the spray of bodily fluids such as human sneezes and coughs.**
- VirusGuard products will not stop a bullet but can leave essential industry employees feeling safer while at work during the COVID-19 pandemic and prepare workplaces for the 'new normal' once businesses re-open.

Additional Information about Bulletproof Glass

Because the material is heavy, bulletproof glass is most often installed on the 1st floor, and we recommend having ballistic framing installed to support it. If you plan to use bulletproof glass on higher floors you'll need to consider the weight of the material and the framing required to support it. It will also add extra costs to your project.

BULLETPROOF RATINGS

Bulletproof glass comes in UL Levels 1-8. The glass we install the most is UL-Rated Levels 1-3, which are appropriate for protecting places like retail locations, banks, schools, and city municipal buildings.

Additional Information about VirusGuard

VIRUSGUARD - MOBILE BARRIERS are self-stabilizing, completely mobile, can be shipped directly to you and easily assembled without professional help.

VIRUSGUARD - FIXED BARRIER SYSTEM can be customized to fit most commercial uniform counter spaces and requires professional installation.
